January 2016 - November 2019

PROJECTS

ReadBlendr

ReadBlendr is a platform for authors to publish and sell their books. It also acts as a marketplace for readers to buy and read. The application is built with Next.js, TypeScript, Tailwind CSS and MongoDB.

Visit site

Snapvista

A Software-as-a-Service application with AI features and a payments & credits system built with Next.js 14, Clerk, MongoDB, Cloudinary AI, and Stripe where a user is able to resize, recolor, remove an object or background from an image.

Visit site

TechMart

This is a full stack eCommerce application with modern design, animations, payments functionality, the ability to add and edit products on the go using a Content Management System, all advanced cart functionalities and most importantly, complete integration with Stripe so that one can cover real transactions.
